Ethiopia-Zone-level Estimates Using Naomi Model for the Year 2024	20

Foreword

The importance of countries' "knowing their epidemic" as a prerequisite for success in defeating HIV is widely accepted and clearly recognized worldwide. The Ethiopian Ministry of Health has also adopted an evidence informed approach for advocacy, planning, and budgeting at the National and regional levels for the HIV and AIDS response.

HIV continues to be a major global public health issue, having claimed almost 33 million lives so far. However, with successful implementation of HIV prevention, diagnosis, treatment and care, including for opportunistic infections, HIV infection has become a manageable chronic health condition, enabling people living with HIV to lead long and healthy lives.

This 2024 HIV Estimates report aims to provide an improved understanding of the HIV epidemic in Ethiopia and offers important insights into the impact of various interventions.

The estimates have been derived from important data sources such as population demographic data from Ethiopian Statistics Service survey and surveillance data, program data such as ART, PMTCT, Viral load from ministry of health and EPHI. These data have been processed using spectrum model version number 6.35. to produce regional estimate, and used Naomi model to further disaggregate the estimation at district-level. The Naomi model workflow and interface were well received by country estimates teams, particularly elements relating to data visualization and validation by technical team in consultation and review with key stakeholders from the Ethiopian Ministry of Health, UNAIDS, USAIDS, WHO, CDC and other national and international organizations.

The highlight of this report indicates that a gradual decline in PLHIV that were estimated 610,350 for the year 2022 to 605,238 in 2023, also new HIV infection declined from 8,355 in the year 2022 to 7,428 for the 2023. It is with pleasure that we communicate the 2023 Ethiopia HIV estimates and 2024 projection report: a product of hard work, resilience, and renewed commitment to ending HIV AIDS. The report seeks to provide insight into the HIV epidemic in Ethiopia, and offers critical input into the impact of key interventions.
